

## IRREGULAR SLABS – FLAGSTONES

Flagstones comprise our line of irregular (natural) slabs coming directly from the selection of the quarry material. These polygonal shaped slabs have natural surface, variable thickness and rough edges. They are distinguished by their sizes and thickness. It is normally used for the paving of exterior areas such as plazas, gardens, interior and exterior wainscoting or any surface the imaginative designer touches.

### AVAILABLE TYPES:

- **GIANT TYPE**  
Used for any kind of paving, enduring heavy traffic intensity.
- **GIANT THIN TYPE**  
Particularly apt for the covering of façades of building, for pool coping, and for the paving of balconies, courtyards, foot-paths, pedestrian areas, gardens, etc. This type is not suitable for areas with dense traffic.
- **SUPER GIANT TYPE**  
Laid down usually on pure sand in places such as gardens, paths, parks, etc.: the exposed green plant materials, visible between the slabs always creates a very effective scene. It is ideal for green, natural pathways.

Product type	Diameter in. (*)	Thickness in. (*)	Weight lb/sf
Giant	Min. 16" (24" average)	From 1 ¼" to 2 ¾"	20.50
Giant thin	Min. 16" (24" average)	From ¾" to 1 ½"	15.50
Super giant	Min. 20" (30" average)	From 2" to 3 ¼"	31.00

(\*)Note: Flagstones are irregular both in shape and in thickness
