

## SMOLLERI

The principal use of this product is for paving steep slopes and raised approaches to garages, or for covering pillars or walls to give them a rustic appearance. In the first instance, they are laid in a perpendicular position, in the second, they are laid flat. The top surface and the two sides are split, and the two sides have a natural surface which gives the designer a smooth or rougher option.

<b>Product type</b>	<b>Length in (*)</b>	<b>Depth in. (*)</b>	<b>Thickness in (*)</b>	<b>Weight Lb/sf</b>
